Senior DevOps Engineer (Cloud + MongoDB + Terraform), (Remote, Full-Time) [HR154

Smart Working

Pune, Maharashtra, India (Remote) Not Disclosed by Recruiter

Required Skills:

Devops Engineer | Devops | Cloud Engineering | Infrastructure Engineering | Site Reliability Engineer

Job Description: About Smart WorkingAt Smart Working Solutions, we believe your job should not only look right on paper but also feel right every day. This isn't just another remote opportunity - it's about finding where you truly belong, no matter where you are. From day one, you're welcomed into a genuine community that values your growth and well-being.Our mission is simple: to break down geographic barriers and connect skilled professionals with outstanding global teams and products for full-time, long-term roles. We help you discover meaningful work with teams that invest in your success, where you're empowered to grow personally and professionally.Join one of the highest-rated workplaces on Glassdoor and experience what it means to thrive in a truly remote-first world.About the RoleWe are looking for a Senior DevOps Engineer with strong cloud infrastructure expertise (GCP / AWS / Azure) using Terraform and deep MongoDB Atlas ownership experience to design, operate, and scale a cloud-native infrastructure powering a large enterprise SaaS platform.This is a high-ownership, architecture-level role, not just execution. You will be responsible for designing and running production systems end-to-end, with a particular focus on database infrastructure (MongoDB Atlas) and scalable cloud environments.You will work in a fully remote, async-first environment, collaborating closely with engineering teams to ensure high availability, performance, and operational excellence across multiple environments.ResponsibilitiesDesign, implement, and operate cloud-native infrastructure across GCP, AWS, or Azure using Terraform.Take full ownership of MongoDB Atlas in production, including:Cluster architecture and scalingReplication and high availabilityBackup and disaster recovery strategiesPerformance tuning and query optimisationSecurity and access controlArchitect and manage containerised and serverless workloads (e.g., Cloud Run, ECS, Kubernetes, or equivalents).Design and operate event-driven systems (e.g., Pub/Sub, SQS/SNS, EventBridge, or equivalents).Build and maintain CI/CD pipelines with a strong focus on automation, reliability, and scalability.Develop reusable Infrastructure as Code (Terraform) modules and manage multi-environment setups.Collaborate with engineering teams on system architecture, scalability, and performance optimisation.Implement robust monitoring, alerting, and observability across distributed systems.Lead incident response and root cause analysis, driving long-term improvements.Own infrastructure decisions end-to-end, including architecture, cost optimisation, and performance.Document systems, create runbooks, and establish best practices.Mentor engineers and promote DevOps best practices across the organisation.Requirements6+ years of DevOps / Infrastructure Engineering experience in production environments.Strong hands-on experience with at least one major cloud provider: GCP, AWS, or Azure using Terraform.Advanced experience with
